Each issue, except the 2% Serial Bonds of 1950, is subject to redemption prior to maturity at the option of the Bank at the prices and upon the conditions stated in the respective bonds. The amounts shown as annual sinking fund requirements are the principal amounts of bonds to be purchased or redeemed to meet each year's requirement, except that in the cases of the 3½% Twenty Year Stock of 1951 and of 1954 the amount shown is the amount of funds to be provided annually for purchase or redemption.

The following table shows the aggregate principal amount of the maturities, sinking fund and redemption requirements each

year for the five years following the date of this statement:

<i>Year Ending June 30</i>	<i>Amount</i>
1956	\$ 23,527,103*
1957	85,466,760
1958	17,921,305
1959	22,148,578
1960	72,148,578
Total	<u>\$221,212,324</u>

* The Bank has called for redemption on August 1, 1955 the outstanding balance of Can\$13,600,000 of the 4% Ten Year Bonds of 1952, due 1962, and the U. S. dollar equivalent of this amount is included in the above table as due in the year ending June 30, 1956.

Totals					

* Denotes loans not yet effective.

NOTES:

¹ Loans made (a) to the member or (b) to a political subdivision or a public or private enterprise in the territories of the member with the member's guarantee.

² Agreements providing for these loans have been signed, but the loans do not become effective and disbursements thereunder do not start until the borrower and guarantor, if any, take certain action and furnish certain documents to the Bank.

³ The Bank has entered into agreements to sell the below listed portions of loans which are not yet effective:

<i>Loan</i>	<i>Principal amount agreed to be sold</i>
106 IN	\$1,364,000
116 PE	310,000
117 IT	5,000,000
118 AUA	153,000
119 CO	866,000
120 PAK	2,049,600
Total	\$9,742,600

The total of both effective and non-effective loans sold or agreed to be sold is the equivalent of \$203,995,255.

⁴ This includes amounts which, according to information available to the Bank, have been prepaid prior to maturity.

⁵ This includes \$13,656,099 of effective loans which the Bank has agreed to sell. Of the undisbursed balance, the Bank has entered into irrevocable commitments to disburse \$12,026,024.

Notes to Financial Statements

JUNE 30, 1955

NOTE A

Amounts in currencies other than United States dollars have been translated into United States dollars:

(i) In the cases of 46 members, at the par values as specified in the "Schedule of Par Values", published by the International Monetary Fund; and

(ii) In the cases of the remaining 10 members (Canada, China, France, Greece, Indonesia, Israel, Italy, Peru, Thailand and Uruguay), the par values of whose currencies are not so specified, at the rates used by such members in making payments of capital subscriptions to the Bank.

(iii) In the cases of non-member currencies, Swiss francs and Afghanistan afghanis, at the rates of 4.2975 francs and 16.80 afghanis, respectively, to 1 United States dollar.

No representation is made that any of such currencies is convertible into any other of such currencies at any rate or rates. See also Note B.

NOTE B

These currencies and notes are derived from the 18% of the subscriptions to the capital stock of the Bank which is payable in the currencies of the respective members. Such 18% may be loaned by the Bank, and funds received by the Bank on account of principal of loans made by the Bank out of such currencies may be exchanged for other currencies or reloaned, only with the approval in each case of the member whose currency is involved; provided, however, that, if necessary, after the Bank's subscribed capital is entirely called, such currencies may, without restriction by the members whose currencies are offered, be used or exchanged for the currencies required to meet contractual payments of interest, other charges or amortization on the Bank's own borrowings or to meet the Bank's liabilities with respect to contractual payments on loans guaranteed by it. These currencies of the several members, and the notes issued by them for any part of such currencies, as permitted under the provisions of Article V, Section 12, are held on deposit with designated depositories in the territories of the respective member.

Article II, Section 9 provides for the maintenance of value of such 18% currencies as follows:

(a) Whenever (i) the par value of a member's currency is reduced, or (ii) the foreign exchange value of a member's currency has, in the opinion of the Bank, depreciated to a significant extent within that member's territories, the member shall pay to the Bank within a reasonable time an additional amount of its own currency sufficient to maintain the value, as of the time of initial subscription, of the amount of the currency of such member which is held by the Bank and derived from currency originally paid in to the Bank by the member under Article II, Section 7 (i), from currency referred to in Article IV, Section 2 (b), or from any additional currency furnished under the provisions of the present paragraph, and which has not been repurchased by the member for gold or for the currency of any member which is acceptable to the Bank.

(b) Whenever the par value of a member's currency is increased, the Bank shall return to such member within a reasonable time an amount of that member's currency equal to the increase in the value of the amount of such currency described in (a) above.

(c) The provisions of the preceding paragraphs may be waived by the Bank when a uniform proportionate change in the par values of the currencies of all its members is made by the International Monetary Fund.

The equivalent of \$3,257 is due from 1 member in order to maintain the value of its currency as required under Article II, Section 9.

NOTE C

Under Article II, Section 8 (a) (i), any original member of the Bank whose metropolitan territories suffered from enemy occupation or hostilities during World War II had a right to postpone payment of $\frac{1}{2}$ of 1% of the amount of its subscription payable in gold or United States dollars until June 25, 1951. All members who received such a postponement have made payment in full except China who has made payments totaling \$270,000 and has stated that it recognized its obligation to the Bank and would pay the balance of \$2,730,000 as soon as it was in a position to do so.

NOTE D

The principal disbursed and outstanding on loans and the accrued charges for interest, commitment fee, service

charge and loan commission are receivable in United States dollars except the following amounts for which the dollar equivalent is shown:

Principal Outstanding	\$211,955,865
Accrued Interest, Commitment and Service Charges	1,780,738
Accrued Loan Commissions	468,283
Total	\$214,204,886

NOTE E

The amount of commissions received by the Bank on loans made or guaranteed by it is required under Article IV, Section 6, to be set aside as a special reserve to be kept available for meeting obligations of the Bank created by borrowing or by guaranteeing loans. On all loans granted to date the effective rate of commission is 1% per annum.

NOTE F

Pursuant to action of the Board of Governors and Executive Directors the net income of the Bank has been allocated to a Supplemental Reserve Against Losses on Loans and Guarantees Made by the Bank; and the future net income of the Bank will, until further action by the Executive Directors or the Board of Governors, be allocated to this reserve.

NOTE G

Subject to call by the Bank only when required to meet the obligations of the Bank created by borrowing or guaranteeing loans.

NOTE H

The Bank has sold under its guarantee \$58,527,344 of loans of which amount \$39,705,944 has been retired. The following table sets forth the maturities of the guaranteed obligations outstanding:

<i>Period</i>	<i>Amount</i>
July 1, 1955 to June 30, 1956	\$ 2,963,400
July 1, 1956 to June 30, 1957	3,102,000
July 1, 1957 to June 30, 1958	1,532,000
July 1, 1958 to June 30, 1959	1,029,000
July 1, 1959 to June 30, 1960	1,000,000
Thereafter	9,195,000
Total	\$18,821,400

NOTE I

The Bank has written off against income all discount and premium on bonds sold or redeemed in the respective years in which sale or redemption occurred.

NOTE J

In terms of United States dollars of the weight and fineness in effect on July 1, 1944.

GENERAL

Applications for membership from Afghanistan and Korea with share subscriptions of \$10,000,000 and \$12,500,000, respectively, have been approved by the Board of Governors. Afghanistan paid the amounts due on account of such subscriptions prior to June 30, 1955 and on July 14 completed the other action necessary and thus became a member on that date. Korea has until September 30, 1955 to accept membership.

Opinion of Independent Auditor

1000 VERMONT AVENUE, N. W.,
WASHINGTON 5, D. C.

August 8, 1955

To
INTERNATIONAL BANK
FOR RECONSTRUCTION AND DEVELOPMENT
WASHINGTON, D. C.

We have examined the financial statements listed below of International Bank for Reconstruction and Development as of June 30, 1955. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, such financial statements, with the notes thereto, present fairly the financial position of the Bank at June 30, 1955, expressed in United States currency, and the results of its operations for the twelve months then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

Loans and Advisory Assistance

COUNTRY-BY-COUNTRY SUMMARY

This Appendix contains a country-by-country description of the operations of the Bank in the past fiscal year. For each country in which the Bank was active, information is given on one or more of the following topics: loans made; negotiations and surveys looking to possible loans; general survey missions and other kinds of advisory services. Loans that were made to borrowers other than member governments have the guarantee of the member government concerned. The interest rates shown include the 1% commission which, under the Bank's Articles of Agreement, is allocated to the Bank's Special Reserve. The loan amounts in the tables are expressed in United States dollars and are net of cancellations and refundings.

Appendix F, beginning on Page 10, gives additional details on all of the loans made by the Bank since the beginning of its operations. That Appendix shows among other things amounts committed, purpose of loan, interest rates, maturity dates, amounts disbursed and repaid, and amounts sold to other investors. Descriptions of the projects for which loans were made in previous fiscal years may be found in the Annual Reports covering the fiscal years during which the loans were made.

A F R I C A

ALGERIA

A Bank mission visited Algeria in May and June 1955 to study economic conditions and development plans, and to examine electric power projects.

EAST AFRICA

TRANSPORT LOAN

Amount: \$24 million

Term: 20 years

Date: March 15, 1955

Interest: 4¾%

BORROWER • East Africa High Commission

GUARANTOR • United Kingdom

The High Commission is a statutory body which operates transport, communications and certain other services shared by the three British-administered territories of Kenya, Uganda and Tanganyika.

PURPOSE • The loan will assist the East African Railways and Harbours Administration, a branch of the High Commission, in carrying out a broad program of transport improvement. Begun in 1949, the program is expected to be completed in 1957. The Bank's loan will help pay for goods and equipment imported under the program during the years 1954-1957. The total cost of the program in these four years will be the equivalent of about \$100 million, the greater part of which is being financed by loans raised in the London market. The transport program includes the building of deep water berths and other facilities at the ports of Mombasa, Dar es Salaam and Tanga; the purchase of new locomotives, rolling stock and railway signalling equipment; the equipment and improvement of railway workshops; construction of new rail lines; and the purchase of road transport vehicles, spare parts and the like.

ECONOMIC BENEFITS • The program is designed to ease a heavy and increasing strain which economic development in the past ten years has placed on East Africa's transport system. Rail traffic and the tonnage of cargo handled at ocean ports are twice as

much as before the war. The increased traffic has been due to a marked growth in export-import trade. Imports especially have increased as the result of both rising income and the need for capital equipment to develop agriculture, industry and public services. Improved transport should result in still further advances in East Africa's international trade.

EGYPT

A Bank mission visited Egypt in late 1954 and early 1955 to study Egypt's economic and financial situation and to make a preliminary study of the Sadd-el-Aali (High Aswan Dam) project for irrigation, flood control and electric power development. The mission's report is now in preparation.

ETHIOPIA

During the year the Bank approved two projects being financed by the Ethiopian Development Bank—expansion of a fiber plant and construction of a macaroni factory. The projects called for foreign exchange expenditures of \$200,000 from the Bank's loan of \$2 million, made in 1950 to provide the Development Bank with foreign exchange. By the end of the fiscal year, the Bank had approved projects requiring a total of \$1.4 million from its loan. A Bank staff member visited Ethiopia in late 1954 and again in May 1955 to assist the Development Bank in working out a credit program to develop coffee production.

FEDERATION OF RHODESIA AND NYASALAND

A Bank mission was in the Federation during April and May 1955 to study development plans and recent economic trends in the area.

NIGERIA

The report of the general survey mission, which visited Nigeria in late 1953, was presented to the

LOANS DURING FISCAL YEAR

Country	No.	Amount
East Africa	1	\$ 24,000,000

TOTAL LOANS 1947-1955

Belgian Congo	1	40,000,000
East Africa	1	24,000,000
Ethiopia	3	8,500,000
French West Africa	1	7,500,000
Northern Rhodesia	1	14,000,000
Southern Rhodesia	1	28,000,000
Union of South Africa	4	110,000,000

Lending in Africa—12 loans in 7 countries totaling		\$232,000,000
---	--	---------------

Governments of Nigeria and the United Kingdom in September 1954.

The mission expressed the view that the substantial economic growth and rise in living standards which has taken place in Nigeria over the past 15 years can be continued and even accelerated by carrying out a broad program of economic development. The program recommended by the mission covers the five fiscal years ending March 31, 1960. It is directed mainly toward strengthening government services to support an expansion in production and encourage new private enterprise. Recommendations are made with respect to agriculture, water resources, industry, mining, electric power, transport and communications, education and health services. Public expenditure at all levels of government was the equivalent of \$143 million in 1952-53; under the

mission's recommendations, it would rise to about \$272 million by 1959-60.

Among specific recommendations of the mission are creation of a special development body to advise on economic policy and to propose, analyze and coordinate public investment; early establishment of a State Bank of Nigeria authorized to issue currency, to serve as the principal depository for funds of government and semi-government organizations, and to buy and sell government securities; recruitment of overseas technical personnel to help overcome Nigeria's present shortage of technical and managerial skill; the training of Nigerians to fill responsible positions themselves; and further surveys of agriculture, water resources and local raw materials to pave the way for the development of the country's rich resources.

ASIA

LOANS DURING FISCAL YEAR

<i>Country</i>	<i>No.</i>	<i>Amount</i>
Ceylon	1	\$ 19,110,000

---	---------------

BURMA

In response to the Government's request, a Bank mission visited Burma in December and January to study the economic situation and the country's development plans. The Bank has given a memorandum to the Government expressing its general views on the development program and the economic and financial policies of Burma.

CEYLON

ELECTRIC POWER LOAN

Amount: \$19.11 million

Term: 25 years

Date: July 9, 1954

Interest: 4¾%

BORROWER • Ceylon

PURPOSE • The loan will finance part of the Aberdeen-Laksapana scheme for developing the hydroelectric power potential of the Kehelgamu and Maskeliya rivers at a point about 50 miles east of Colombo, Ceylon's capital. The scheme is being carried out in stages, the first of which was completed in 1951. The Bank's loan will help to finance the next stage: a storage dam will be built on the Kehelgamu to regulate the river's flow so that more power can be generated; generating capacity at the power station built in the first stage of the scheme will be increased to 50,000 kilowatts by the addition of another 25,000-kilowatt unit; and additional transmission and distribution facilities will be constructed.

The total cost of this stage is estimated at the equivalent of \$31.5 million, and it is expected to be complete in 1959.

ECONOMIC BENEFITS • The project will supply additional power to southwestern Ceylon, the most productive and populous part of the island. In this area are located Colombo, Ceylon's largest city and chief port, and most of the factories which process tea, rubber and coconut products, Ceylon's main exports. Ceylon has virtually no fuel resources, and the growing demand for power can be met most economically by development of hydroelectric potential.

OTHER ACTIVITIES

INDUSTRIAL RESEARCH INSTITUTE • The Government established the Ceylon Institute of Scientific and Industrial Research in March 1955. The Institute is the outgrowth of recommendations made by a general survey mission which visited Ceylon in 1951. It will undertake research designed to develop new uses for Ceylon's natural resources and to improve the processes and equipment used in industrial plants. A Bank staff member arrived in Ceylon in February 1955 to take up his duties as the first Director of the Institute. The cost of his services and those of a senior assistant are being shared, for a period of up to five years, by the Bank and the United Nations Technical Assistance Administration.

DEVELOPMENT CORPORATION • The Government has continued to consult the Bank regarding the establishment of a Development Corporation. Two members of the Bank's staff went to Ceylon in June 1955 for further discussion.

INDIA

ELECTRIC POWER LOAN

Amount: \$16.2 million
Date: November 19, 1954

Term: 20 years
Interest: 4¾%

BORROWER • The Tata Hydro-Electric Power Supply Co., The Andhra Valley Power Supply Co., Ltd., The Tata Power Co., Ltd.

These companies are privately owned and form part of the large group of Tata enterprises which have a long record of operations in many different industries in India. The companies are the sole suppliers of bulk power in Bombay.

PURPOSE • The loan will pay the foreign exchange costs of constructing a thermal electric power plant in Bombay, with a maximum capacity of 125,000

kilowatts, and transmission facilities. Work on the plant began in 1953 and the first 62,500-kilowatt unit is scheduled to come into operation in October 1956. The whole project should be complete by the end of 1957. The total cost is estimated at the equivalent of \$27.5 million.

ECONOMIC BENEFITS • The plant will help relieve the acute power shortage in Bombay and the surrounding area, a major industrial center. The capacity of the power plants serving the Bombay area by the end of 1955 will be 273,000 kilowatts; the new plant will add more than a third to this capacity by the end of 1957. The present system, being largely hydroelectric, is highly vulnerable to shortages of rainfall. The additional thermal electric capacity will be enough to balance not only the present system but also the hydroelectric facilities which the Bombay State Government intends to install at Koyna, about 140 miles south of Bombay.

PARTICIPATION • The First National City Bank of New York participated in the loan, without the Bank's guarantee, to the extent of \$1,364,000, rep-

representing the first four maturities which fall due from October 15, 1958 through April 15, 1960.

LOAN FOR INDUSTRIAL DEVELOPMENT

Amount: \$10 million

Term: 15 years

Date: March 14, 1955

Interest: 4½%

BORROWER • Industrial Credit and Investment Corporation of India, Limited

The Corporation was established in early 1955 for the purpose of assisting the growth of private industry in India. It developed from discussions conducted in India in February 1954 by two Bank consultants. Together with a member of the Bank's staff, they explored with the Government and with Indian industrial leaders the possibility of creating an institution to provide and stimulate investment in industry. Subsequently British and American investors agreed to provide part of the equity capital for the new institution. Of the initial share capital, amounting to 50 million rupees (\$10.5 million), 35 million rupees were subscribed by Indian investors; 10 million rupees were subscribed by British investors (the Eastern Exchange Banks, several insurance companies and industrial firms, and the Commonwealth Development Finance Company, Ltd.); and 5 million rupees were subscribed by United States investors (Bank of America, the Rockefeller brothers, Olin Mathieson Chemical Corp. and Westinghouse Electric International Corporation). In addition, the Indian Government made a long-term, interest-free advance to the Corporation of 75 million rupees drawn from counterpart funds generated by United States aid.

FUNCTIONS OF CORPORATION • The Corporation will make long and medium term loans to industrial enterprises; take equity participation in industrial enterprises; underwrite new issues of securities; guarantee loans by other investors; and help industry to obtain managerial, technical and administrative advice and assistance. The proceeds of the Bank's loan will be used for purchases of imported equipment, materials and services needed to carry out projects financed by the Corporation.

ECONOMIC BENEFITS • The nature of the Corporation, and its sponsorship by leading financial institutions in India and abroad, should enable it to tap funds in India not at present being made available to industry, and in due course to increase the flow of foreign investment into India. Furthermore, its power to underwrite new issues will fill a gap in the Indian capital market. Through its connections abroad, the Corporation should also be in a position to help Indian industry to meet some of its needs for technical knowledge and managerial experience.

OTHER ACTIVITIES

POWER PROJECT DISCUSSIONS • The Bank has had preliminary discussions with officials of the Indian Government about the possibility of assisting in the financing of the Koyna hydroelectric power project in the State of Bombay.

INDONESIA

In June 1955 a Bank mission arrived in Indonesia for a visit of about six weeks. Its purpose was to provide the Bank with first-hand knowledge of Indonesia's economy and its potentialities.

IRAN

At the request of the Iranian Plan Organization, staff members visited Iran in November 1954 and February 1955, to discuss the new development program which the Organization is charged with formulating and supervising. As a result of these discussions, the Bank and the Organization have agreed to an arrangement under which the Bank will recruit a small number of foreign specialists, mostly engineers, to work as employees of the Organization in Iran. The Plan Organization will provide funds to be used by the Bank to make disbursements to these specialists for their services as employees of the Organization.

IRAQ

The Government is assuming the entire cost of the Wadi Tharthar flood control project for which the Bank made a loan of \$12.8 million in 1950. In

January 1955 the Government canceled the unused balance, amounting to \$6.5 million, of the loan, and in March, repaid the outstanding balance of \$6.3 million, 10 years before final maturity. Work on the project has reached an advanced stage. If it progresses on schedule, it will be ready to divert flood waters from the Tigris River by the spring of 1956.

ISRAEL

A Bank staff member visited Israel from January to April 1955 to advise the newly established Bank of Israel on organization and technical methods of carrying out monetary policies.

JAPAN

AGRICULTURAL MISSION • A Bank mission was in Japan from July to September 1954 in response to the Government's request for an appraisal of Japan's agricultural program which would help in formulating future governmental policies and in determining the magnitude and direction of public investment in agriculture. The mission's report was transmitted to the Government in January 1955.

While in Japan, the mission made a preliminary study of four agricultural projects with a view to determining their suitability for Bank financing. These included the irrigation of upland and paddy fields in the Aichi Prefecture east of Nagoya; for the reclamation of Hachiro Lake, a shallow lagoon on the island of Honshu; for the reclamation of peatlands in the Ishikari Valley in central Hokkaido; and for pilot projects to establish methods of large scale mechanical land reclamation most suited to opening large areas to cultivation in Hokkaido and northern Honshu. The mission also considered a plan to increase the importation of livestock as a desirable adjunct to the proposed reclamation of lands which would be suitable for grazing.

The Bank sent a memorandum to the Government in February 1955 giving its views on the additional technical studies and organizational measures which would need to be undertaken before these projects could be considered for loans. Subsequently discussions have taken place both in Japan and Washing-

ton regarding the projects, and in June 1955 the Bank sent two technicians to Japan to examine the mechanical land reclamation projects.

INDUSTRIAL AND POWER PROJECT STUDIES • Bank staff members were in Japan between October and December 1954 to examine projects for the modernization of steel and machinery manufacturing plants and for hydroelectric power development, for which Bank financing has been requested. They completed study of three hydroelectric projects and two steel company projects and in May 1955 the Bank's views on these projects were given to the Government for further consideration.

The Government asked for and received advice from the Bank on how to approach the problem of lowering costs in the Japanese coal industry, a vital sector of the economy. The Bank agreed that under certain conditions it would help pay the expenses of a comprehensive survey of the industry by consulting engineers. Representatives of the Government are expected in Washington in August 1955 to discuss further details including the selection of qualified consultants.

JORDAN

A general survey mission arrived in Jordan in late March 1955 for a stay of about four months. It will assess Jordan's economic potentialities and prepare recommendations designed to assist the Government in formulating a long-term development program. The seven-man mission includes economists and specialists in agriculture, mineral resources and transportation.

LEBANON

STAFF ASSISTANCE • A Bank staff member was in Lebanon during December-February to advise the Government on matters affecting economic planning. LOAN PROJECT • A Bank mission visited Lebanon from November to January to appraise the economic and financial situation and to study the multipurpose Litani River development project in all its aspects. The Bank has invited the Government and the Litani Authority to send representatives to Wash-

ington to discuss legal, financial and administrative problems in advance of loan negotiations. The Lebanese delegation is expected to arrive in Washington in July.

MALAYA

In June 1955 the Bank transmitted to the Governments of the Federation of Malaya, the Crown Colony of Singapore and the United Kingdom, the report of the general survey mission which visited Malaya in early 1954.

The report sets forth the mission's recommendations for government action and priority investment over a five-year period, 1955-59, for both the Federation and Singapore. The proposed program for the Federation calls for expenditures of M\$775 million (U.S.\$258 million) and that for Singapore of M\$610 million (U.S.\$203 million). The programs do not depart significantly in amount or character from recent patterns of public investment. The mission stressed the importance of maintaining the scale of public expenditures on economic and social development in both territories in view of the unusually rapid rates of population growth, now among the highest in the world.

The report notes that by Asian standards the Malayan economy has reached a relatively advanced stage. It has been built principally on the production of rubber and tin for export, on a large entrepot trade, on the production of food mostly for local consumption, and a variety of small industries. For the Federation, the mission placed highest priority on the replanting of rubber areas with high-yielding varieties to enable the rubber industry to compete with synthetic rubber and maintain its present place of paramount importance in the economy. The mission also recommended that surveys be undertaken to increase knowledge of Malaya's agricultural potential. The mission recognized the importance of increasing rice production, but urged that more attention be given to the relative economic advantages of other crops. Special emphasis, it believed, should be placed on the possibilities of extending oil palm, cocoa and coconut cultivation.

While transport, communications and power are quite well developed in the Federation, recommendations were made for their continued expansion, as a basis for the further growth of a variety of private industrial, agricultural and commercial activities.

About a quarter of the recommended investment for the Federation is in the field of social services, including improvements in sewerage, water supply, and housing. There is a strong and insistent demand in Malaya for more educational, medical and health facilities and the mission believes that further extension and improvement of these services should be supported by the Government.

Much of Singapore's capital requirement is for the expansion and improvement of such essential services as electricity, gas, water, sewerage, telecommunications, streets, roads and marketing facilities. The mission endorsed Singapore's plans to enlarge port capacity, to improve and extend street and road networks and to expand telephone facilities. About half the recommended investment for Singapore is for social services, with the largest expenditure allocated to low-cost rental housing and public schools.

The mission believes that Government can assist private enterprise in both territories by offering more vocational training, assisting in technical and market research, providing suitable sites and other services for new industries, improving industrial credit arrangements and, in appropriate cases, adopting policies of protection.

The report contains several recommendations for the financing of the program and for organizational and institutional measures designed to facilitate the drafting and execution of development plans.

PAKISTAN

ELECTRIC POWER LOAN

Amount: \$13.8 million
Date: June 20, 1955

Term: 15 years
Interest: 4½%

BORROWER • The Karachi Electric Supply Corporation, Ltd.

The Corporation was organized in 1913 and operated as a private company until 1952 when the Government obtained majority control by providing

capital for urgently needed expansion that was not available from private sources. The Government intends to dispose of these shares in the Corporation as soon as circumstances are favorable. The Corporation is the sole supplier of power to the metropolitan area of Karachi, the capital of Pakistan.

PURPOSE • The loan will help to finance the construction of a 30,000-kilowatt thermal power plant in Karachi; the rehabilitation of existing power plants; the extension and improvement of transmission and distribution facilities; and engineering services. The new thermal power station is expected to come into operation early in 1956 and the entire project should be complete by the end of that year. The total cost is estimated at the equivalent of \$25 million. The Bank's loan is expected to be made entirely in European currencies, chiefly pounds sterling and German marks, and will finance most of the foreign exchange costs.

The new power station and the Corporation's existing steam power plants will be equipped to burn natural gas to be transported to Karachi by the Sui Gas Transmission Company, Ltd. The Bank made a loan to this company in June 1954 for the construction of a pipeline from the Sui gas field to Karachi. The delivery of gas to consumers is scheduled to begin in August 1955.

ECONOMIC BENEFITS • The project will double the present output of power generated by the Corporation and will meet the most urgent needs of the Karachi area. There has been an unusually rapid growth in and around Karachi of light industries, most of which process indigenous raw materials for domestic consumption. Many industrial plants at present cannot be put into full operation because of the shortage of power. The demand for electricity for commercial and residential purposes has also increased substantially as a result of the growth of the city since Partition.

PARTICIPATION • Six of the Eastern Exchange Banks, the group with offices in Pakistan, participated in the loan, without the Bank's guarantee, to the extent of £732,000 (\$2,049,000). This represents the first five maturities, all of which will be payable in

sterling, falling due from December 1, 1957 through December 1, 1959. The participating banks are The Chartered Bank of India, Australia & China; Eastern Bank, Limited; Grindlays Bank Limited; Lloyds Bank Limited; Mercantile Bank of India, Limited; and the National Bank of India, Limited.

OTHER ACTIVITIES

LOAN NEGOTIATIONS • At the end of the fiscal year, negotiations were in progress for loans to The Trustees of the Port of Karachi for the reconstruction of the East Wharves and to the Karnaphuli Paper Mills Limited for a pulp and paper mill in East Pakistan.

SYRIA

GENERAL SURVEY MISSION REPORT • In April 1955 the Bank transmitted to the President of Syria the report of the general survey mission which spent from February until late April 1954 in Syria.

The mission was impressed with the rapid growth of the Syrian economy over the last twenty years, due almost wholly to private enterprise. The mission concluded, however, that private initiative will not be able to maintain this rate of growth unassisted and that the time has come for the Government to take a more active role, particularly in the field of public investment, in order to provide the basis for further expansion of private enterprise. The report contains recommendations for government action for the years 1955-1960, requiring public expenditures of about £\$1,900 million (\$530 million).

Greatest emphasis is focused on the further development of agriculture, the main occupation of the people, the chief source of raw materials for manufacturing and the basis of most of Syria's commerce. It is recommended that the Government undertake land surveys, proceed with irrigation and land settlement schemes, provide better transport for export commodities, establish storage facilities, encourage better farming methods and improve and expand agricultural education.

Other recommendations pertain to transport, industry, power, social services and finance. The de-

velopment of transport is one of Syria's most urgent needs. Because road transport is best suited to the demands of the Syrian economy, most of the mission's recommendations in this field relate to the highway system. In industry, the report suggests government policies to stimulate private investment. The mission recommended that power facilities be expanded to three times present capacity by 1960. Other recommendations relate to the extension of educational facilities, particularly in the vocational field; measures to improve public health and social services; methods of raising government revenues for development expenditures; and the establishment of a central statistical office.

The Government has formulated a six-year development budget taking into account the mission's principal recommendations.

PROJECT DISCUSSIONS • Studies and discussions have continued during the year regarding possible Bank financing of three projects submitted by the Government: equipment for the Port of Latakia, a program of road construction, and the draining and reclaiming of the swamplands (Ghab) in the Orontes River

valley. In June 1955 the Bank informed the Government of its readiness to negotiate two loans: one covering most of the foreign exchange cost of equipping the Port of Latakia, and the other to help finance the construction of a road network linking the Jezireh province, Syria's major granary, with Aleppo and Latakia. At the same time certain additional information was requested regarding the Ghab reclamation project.

THAILAND

Bank staff members and a railway consultant visited Thailand between November 1954 and February 1955 to appraise and give advice on railway and port projects for which Bank financing had been requested. The railway project would be for carrying out an extensive rehabilitation program; and the port project would be for the purchase of three dredges to be used to keep the harbor and channel into Bangkok open to ocean-going vessels. In June 1955 the Bank informed the Thai Government that it was prepared to open negotiations for a loan to help finance the railway project.

A U S T R A L A S I A

LOAN DURING FISCAL YEAR

<i>Country</i>	<i>No.</i>	<i>Amount</i>
Australia	1	\$ 54,500,000

TOTAL LOANS 1947-1955

Australia	4	\$ 258,500,000
-----------	---	----------------

A U S T R A L I A

LOAN FOR AGRICULTURE, TRANSPORT, ELECTRIC POWER AND INDUSTRY

Amount: \$54.5 million

Date: March 18, 1955

Term: 15 years

Interest: 4½%

BORROWER • Australia

PURPOSE • The loan was made to help finance imports of equipment needed in agriculture, transportation, electric power and industry. About half the loan is being used to improve transport, particularly

road transport, through the purchase of graders, road construction equipment of various kinds, trucks, and truck components which will be assembled in Australia. The loan is also paying for five four-engined aircraft and for components for the manufacture of diesel locomotives and railcars. About \$20 million of the loan was allocated to agriculture to finance the import of tractors, combine harvesters, hay balers and other agricultural machinery. The remainder of the loan, about \$7.5 million, is to purchase equipment for industry and for generating and

distributing electricity. The industrial equipment is for iron and steel production, food processing, mining, automotive and general engineering industries.

ECONOMIC BENEFITS • The Bank has now lent Australia a total of \$258.5 million to assist in carrying out large-scale development, both public and private. Most of this development is being financed from Australia's own resources; the Bank loans have provided the dollar exchange necessary to import certain equipment which is available only in the dollar area. The most recent loan is contributing especially to increasing agricultural production and to improving key means of transport — road, rail and air. Agricultural products account for more than 80% of Australia's earnings in international trade. The new farm machinery is helping to increase rural output and is enabling government agencies to carry forward programs to intensify land use and increase productivity through reclamation, pasture development, irrigation, and water and fodder conservation. Australia's rapid economic growth has put a heavy

burden on transport of all kinds. The loan is helping to improve the road system and to increase the number of commercial vehicles, as well as to modernize rail and air operations. Additional electric generating capacity and new industrial equipment for which funds were also provided will help maintain the pace of development in the Commonwealth.

PARTICIPATION • Eleven private banks in the United States—the largest number to participate in a Bank loan to date—took \$10.4 million of this loan without the Bank's guarantee. They took the first six maturities of the loan falling due from March 15, 1958 through September 15, 1960. The banks are Manufacturers Trust Co., The First National Bank of Boston, The First National Bank of Chicago, Bank of America (International), The Philadelphia National Bank, Chemical Corn Exchange Bank, J. P. Morgan & Company, Inc., National Shawmut Bank of Boston, Brown Brothers Harriman & Co., The Pennsylvania Company for Banking and Trusts, and Empire Trust Company.

E U R O P E

A U S T R I A LOAN FOR REISSECK-KREUZECK ELECTRIC POWER PROJECT

Amount: \$12 million

Term: 25 years

Date: July 19, 1954

Interest: 4¾%

BORROWERS • The Draukraftwerke and the Verbundgesellschaft

The Verbundgesellschaft is government owned and controls the main national power network and the operations of the Draukraftwerke. Its system serves seven of Austria's nine provinces, an area which includes Vienna and most of Austria's industrial centers.

PURPOSE • The project being financed will harness the potential power in a number of lakes and small streams situated in the Reisseck and Kreuzeck Mountains, a part of the Austrian Alps, which flank the valley of the Moell River. Construction of the project was started in 1947 and by the end of 1953 the plant was partially in operation. The Bank's loan will be used to finance the remaining part of the project: the expansion of generating capacity at the Kolbnitz power station, from 48,000 to 104,000 kilowatts, the construction of a new 8,000-kilowatt station, a pumping station, and additional dams, tunnels, canals and other civil works. When completed at the end of 1958, the Reisseck-Kreuzeck project will add 112,000 kilowatts of generating capacity to the Verbundgesellschaft system; capacity of the system now totals 1,352,800 kilowatts, or 56.6% of Austria's total. The total cost of the project is estimated at the equivalent of \$34.5 million. The Bank's loan is being made half in Italian lire and half in Swiss francs. Most of the loan will be used to cover expenditures incurred in Austria.

ECONOMIC BENEFITS • Austria's rivers are fed largely

by melting snow from its mountains. Consequently, they supply much less water in winter for hydroelectric power and the electricity networks have to depend heavily on thermal power during this period. An important feature of the Reisseck-Kreuzeck development is that it provides for water storage and the generation of hydroelectric power in winter as well as summer. The Draukraftwerke will be able to increase its supplies of power to Austrian industries and to export more power to industries in northern Italy, which likewise experience winter shortages of electricity. The project is an important step in the realization of Austria's large hydroelectric potential, which is one of the chief natural resources remaining to be fully developed in Europe.

LOAN FOR LÜNERSEE ELECTRIC POWER PROJECT

Amount: \$10 million

Term: 25 years

Date: June 14, 1955

Interest: 4¾%

BORROWER • Vorarlberger Illwerke (VIW)

This company was established in Austria in 1924 with German, Austrian and Swiss capital, to develop the hydroelectric resources of the Lünensee (Luner Lake) and of the Ill River, both in the province of Vorarlberg in western Austria. Because of the predominance of German ownership, the company has been under public administration since the end of the war.

PURPOSE • The main purpose of the project is to supply power for export to the Ruhr and southwest Germany during periods of peak demand. The Lünensee will be the reservoir for the project. A dam will be built to raise the storage capacity of the lake and the lake's water supply will be increased sixfold by diverting the run-off of a glacier into the

Lending in Europe—41 loans
in 12 countries totaling \$928,953,563

lake and by pumping excess water up from a basin located below the new power station. Included in the project are the construction of a 190,000-kilowatt power station; the building of the dam and the diversion system; the construction of six miles of tunnels, syphons and penstocks to bring water down to the power plant and to return pumped water to the lake; and the construction of a transmission line to the German border. Work on the project was started in 1954 and is expected to be complete by the end of 1958. The total cost is estimated at the equivalent of \$38.6 million. The greater part of the Bank's loan will be in European currencies and the remainder in United States dollars. About \$7 million of the loan will be used for imported equipment; the remainder for equipment purchased in Austria.

ECONOMIC BENEFITS • In recent years about 85% of the power produced by the VIW from its four existing plants has been sold to two German companies which supply power to the Ruhr and to Württemberg-Baden. The remainder has been used in Vorarlberg and Tyrol. The Lünensee project will add 190,000 kilowatts to the VIW's present capacity of 356,000 kilowatts. Under a long-term agreement with the VIW, the two German companies and the province of Vorarlberg have contracted to purchase the power to be produced by the Lünensee project. Through exports of power to Germany the project will add the equivalent of \$1.5 million annually to the present foreign exchange earnings of the company; it will also make more power available to Vorarlberg and Tyrol.

PARTICIPATION • The Philadelphia National Bank participated in the loan, without the Bank's guarantee, to the extent of \$153,000, representing the first maturity which falls due May 1, 1960.

BELGIUM

LOAN FOR WATERWAYS AND PORT IMPROVEMENTS

Amount: \$20 million Term: 15 years
Date: December 14, 1954 Interest: 4½%

BORROWER • Belgium

JOINT FINANCING • The Bank's loan was made simultaneously with a public offering of \$30 million of Belgian bonds by an underwriting group of 71 United States investment firms and banks headed by Morgan Stanley & Co. and Smith, Barney & Co. The proceeds of the loan and the bond issue will cover part of the expenditures incurred in Belgium for five projects to improve and modernize ports and inland waterways in Belgium. The total cost of these projects will be equivalent to \$118 million and they will all be completed by 1958.

DESCRIPTION OF PROJECTS AND BENEFITS TO THE ECONOMY • The port project consists of the completion of the Baudouin Lock to afford seagoing ships a second large entry to the Antwerp dock basin. The new lock will have a greater capacity than the existing single lock and will help avoid delays now encountered by ships entering the port. Antwerp handles the bulk of the exports of the Belgium/Luxembourg Economic Union, as well as large tonnages of transit goods, and efficient operation of its port installations is vital to the Belgian economy.

Two other projects consist of the construction of canals which will facilitate and speed up traffic between Antwerp and the highly industrialized southern province of Hainaut. A fourth project consists of the completion of the Ghent Ring canal to by-pass the city and thus eliminate delays in transport. The fifth project is the construction of a dam and locks at Neuville to improve navigation on the Upper Meuse River between the industrial centers of Liège and Namur. When the projects are completed Bel-

gium will have a modern network of waterways for the transport of bulk cargo. This is essential to Belgian industry since nearly a third of domestic and foreign trade now moves on canal barges, and the proportion has been growing in recent years.

FINLAND

LOAN FOR WOOD-PRODUCTS INDUSTRIES AND ELECTRIC POWER

Amount: \$12 million Term: 15 years
Date: March 24, 1955 Interest: 4½%

BORROWER • Bank of Finland

PURPOSE • Like the greater part of the Bank's four previous loans in Finland, the proceeds of this loan will be used to expand and modernize wood-products industries and to provide additional supplies of electric power. About three-quarters of the loan will be in European currencies for the purchase of equipment in Denmark, France, Germany, Sweden, Switzerland and the United Kingdom; the remainder will be in dollars for purchases in the United States. The funds are being relented by the Bank of Finland to the companies carrying out the projects. The loan will finance one-fifth of the total cost of the projects; the remaining costs will be met from Finnish sources.

The equivalent of about \$8 million has been allocated to five wood-products companies. Two of the companies are undertaking major expansion in the manufacture of sulphate pulp and kraft paper. The other three are replacing and modernizing existing plants and in some cases installing equipment which will save imported fuel and make use of valuable chemical residues.

The equivalent of \$4 million has been allocated to two electric power projects. One is a new hydroelectric plant being built in northern Finland. The plant will have an initial generating capacity of 100,000 kilowatts and will be connected with the national power grid. The other project is a 30,000-kilowatt thermal power plant being built in western Finland. Initially, this plant will be connected to a regional network and later its output will be fed into the national power grid.

ECONOMIC BENEFITS • By increasing the output of wood products and electric power, the loan will help Finland to make fuller use of her two most important natural resources—forests and water power. Modernization and expansion of wood-products industries, already the major source of Finland's foreign exchange earnings, will permit the manufacture of more highly processed products able to command better prices in world markets. Other benefits stemming from improvements in manufacturing methods will be greater operating efficiency and lower unit production costs. Increasing Finland's available electric power supplies will aid both wood-products and other industries.

PARTICIPATION • The Bank of America National Trust and Savings Association and The First National City Bank of New York participated in the loan, without the Bank's guarantee, to the extent of \$2,288,000. Each bank took \$1,144,000 of the loan, representing the first six maturities falling due from April 15, 1958 through October 15, 1960.

GREECE

In July and August 1954, a Bank mission visited Greece to study the desirability of establishing an industrial development bank and to examine the technical aspects of projects for the exploitation of lignite deposits and the construction of a nitrogenous fertilizer plant. As a result of the mission's recommendations, the Government has retained consultants to give further study to the lignite project.

ICELAND

The Bank's Director of Marketing visited Iceland in April 1955 to advise on the marketing of government bonds.

ITALY

LOAN FOR AGRICULTURE, INDUSTRY AND ELECTRIC POWER

Amount: \$70 million
Date: June 1, 1955

Term: 20 years
Interest: 4¾%

BORROWER • Cassa per il Mezzogiorno

The Cassa is a government agency which since 1950 has been charged with the administration of a comprehensive program to raise standards of living in southern Italy, including the islands of Sicily, Sardinia and Elba.

PURPOSE AND ECONOMIC BENEFITS • The loan will provide funds for projects to increase agricultural production, industrial output and electric power service in southern Italy. The Cassa will spend the equivalent of \$20 million to meet part of the cost of constructing irrigation works on the Catania Plain, in eastern Sicily, and will relend \$50 million for industry and power: \$20 million will be lent to private companies to help establish new private industrial enterprises, including five in Sicily and two on the mainland; \$30 million will be lent for seven mainland power stations and a transmission line.

The Catania irrigation project is based largely on the creation of a dam and reservoir at Pozzillo on the Salso River, northwest of the Plain. It will make possible the irrigation of about 75,000 acres containing some 1,500 farms. Irrigation will enable farmers to cultivate the Plain much more intensively and to greatly increase the value of farm output, especially by expanding the production of citrus fruits, which are among Italy's most important export crops. More intensive cultivation should create the equivalent of 10,000 new full-time farm jobs in the area. While the project will not be finished until 1961, the major works will be finished by 1958. When full production of new citrus crops is reached, about 1967, the annual value of farm production is expected to reach 14,000 million lire (\$22,400,000), or three times the present value; and net income to farmers and farm laborers is expected to quadruple, to 10,000 million lire (\$16 million) annually.

The five factories to be established in Sicily will help carry forward the development of agriculture there. Two factories, one at the city of Catania itself and another near Syracuse, will make compound fertilizers. A third plant, at Catania, will make concentrated citrus and grape juices and tomato paste from locally grown produce. A pharmaceutical plant near Palermo will, among other things, pro-

duce insecticides and fungicides to control animal and plant diseases and pests that cause severe losses on farms in Sicily and the rest of southern Italy. A cement plant to be built near Palermo will reduce Sicily's dependence on imports from the mainland. Two new factories will be situated on the mainland: one will be a mill to produce woolen yarn at Frosinone; the other will be a pulp and paper mill at Avezzano. All of these projects should be in operation by 1958 or sooner; taken together, they will improve Italy's international trade position, by making products for export or to replace imports.

With \$30 million of the Bank's loan, the Cassa will help to finance eight different power projects on the mainland which will add 221,700 kilowatts to generating capacity in the area. The projects will be completed by the end of 1957, and will increase generating capacity in southern Italy by one-sixth. The demand for electricity in southern Italy has been rising rapidly since the war, partly as the result of industrial growth stimulated by the Cassa program; and additional power is an important requisite to the continued development of the area.

The Bank's loan is intended to be made for the most part in European currencies. The funds will meet about 45% of the cost of the Catania project, about 40% of the cost of the industrial projects, and about 60% of the cost of the electric power projects. PARTICIPATION • The Bank of America National Trust and Savings Association participated in the loan, without the Bank's guarantee, to the extent of \$5 million, representing the first five maturities falling due from July 15, 1958 through July 15, 1960.

NETHERLANDS

The Government prepaid \$102,687,000 and 24,515,700 Belgian francs on the \$195 million 25-year loan made by the Bank in 1947. The prepayments, made in August 1954 and in February 1955, covered the longest maturities on the loan, falling due in 1966 through 1972.

In September 1954, KLM Royal Dutch Airlines prepaid the balance of \$5.6 million then outstanding of the \$7 million, six-year loan it had received from

the Bank in 1952, refinancing it with two banks in New York.

NORWAY

GENERAL DEVELOPMENT LOAN

Amount: \$25 million

Term: 20 years

Date: April 19, 1955

Interest: 4¾%

BORROWER • Norway

JOINT FINANCING • The Bank's loan was made simultaneously with a public offering of \$15 million of Norwegian bonds by an underwriting group of 30 United States investment firms and banks headed by Kuhn, Loeb & Co., Harriman Ripley & Co., Incorporated, Lazard Freres & Co., and Smith, Barney & Co.

PURPOSE • The proceeds of the Bank loan will be applied to the importation of capital goods required to continue the development of the Norwegian economy. The proceeds of the public bond issue will be similarly applied. It is expected that about one-half of the Bank's loan will be in United States dollars and the rest in pounds sterling and Netherlands guilders.

ECONOMIC BENEFITS • Since the end of the war, the development of the Norwegian economy has been rapid and substantial. In the immediate postwar years, investment was exceptionally high because of the need to replace assets lost during the war, when half the merchant marine was sunk and many buildings and industrial plants were destroyed. Not all of this investment could be financed from current savings; the additional capital required for reconstruction came from Norway's own foreign exchange reserves and from United States Government assistance. The lost assets have now been replaced and because of large earnings during the years 1951-52, particularly from shipping, Norway has been able to continue building up its stock of capital equipment. The high rate of investment of recent years, however, could not be maintained without endangering economic stability, and the Government is taking measures to bring the rate of investment into line with current conditions. There remains a need

for additional capital for productive purposes which Norway traditionally has sought and found abroad. The Bank loan and the bond issue will help to meet this need.

TURKEY

INDUSTRIAL DEVELOPMENT BANK • The International Bank had made two loans of \$9 million each, in 1950 and 1953, to provide the Industrial Development Bank of Turkey with foreign exchange to relend to private industrial concerns for projects requiring imports of machinery and equipment.

During this fiscal year, the Bank approved 14 projects under these loans requiring the equivalent of \$3 million. The projects included textile mills and factories for the production of glue, corn products, sheet metal products, automobile springs, cast iron goods, wire and cable, paint pigments and hollow spun concrete poles for power transmission lines and lighting standards.

CANCELLATION OF PART OF \$25.2 MILLION LOAN • At the request of the Government, the Bank canceled \$2,356,000 of the \$25.2 million loan made in June 1952 for the Seyhan multi-purpose dam project.

WESTERN HEMISPHERE

BOLIVIA

In January 1955 two staff members visited Bolivia to assess the country's economic and financial situation and to become acquainted with its development program.

BRAZIL

In July-September 1954, the Bank lent a staff member as adviser to the Banco do Nordeste do Brasil, to assist in its organization and in the establishment of basic services. The Banco do Nordeste was established by the Government in August 1952 to finance the economic development of northeast Brazil.

BRITISH HONDURAS

In June and July of 1954, a staff member visited British Honduras to advise the Government on its economic development program. His report was transmitted to the Government in November 1954.

CHILE

In November 1954 the Government transmitted to the Bank for its consideration a report setting forth a comprehensive and detailed program for the de-

velopment of Chilean agriculture and transportation. The agricultural program was based in large part on the recommendations of the Bank-FAO mission of 1952. A Bank mission visited Chile in March and April 1955 to bring up to date information on the economic and financial situation and to study the economic and financial bases of the program. Particular attention was given to measures which have been taken or are contemplated to contain inflationary forces, to provide adequate financing for the domestic costs of the program and to revive incentives for investment and production in agriculture and other fields. The mission's report is under consideration in the Bank.

COLOMBIA

LOAN FOR AGRICULTURAL DEVELOPMENT

Amount: \$5 million	Term: 7 years
Date: December 29, 1954	Interest: 4¼%

BORROWER • Caja de Crédito Agrario, Industrial y Minero.

The Caja is an autonomous official credit institution with nearly 200 branches which provide credit

and banking facilities to rural communities, and sell agricultural supplies.

PURPOSE • The loan will finance the importation of tractors, spare parts, tools and other repair and maintenance equipment needed for mechanized agriculture. This is the Bank's second \$5 million loan to the Caja for this purpose; the first was made in 1949. As in the case of the first loan, the funds which the Caja receives from the sale of machinery are being placed in a revolving fund, to finance additional machinery imports until needed to purchase the currency required to service the loan from the Bank. Machinery imports financed by the revolving fund under the first loan had amounted to about \$16 million by the end of April 1955.

ECONOMIC BENEFITS • The machinery imported under the loan will contribute to the expansion of farm production needed to increase Colombia's supply of foodstuffs. The machinery purchased under the first loan helped make possible the marked increase in farm production after 1950. It permitted an expansion of cultivated areas, raised yields per acre and reduced costs of production.

PARTICIPATION • The Chase Manhattan Bank participated in the loan to the extent of \$2 million, representing the first four maturities falling due in 1957 and 1958. The First National Bank of Boston participated to the extent of \$1 million, representing the fifth and sixth maturities falling due in 1959. Both banks participated in the loan without the Bank's guarantee.

ELECTRIC POWER LOAN

Amount: \$4.5 million Term: 20 years
Date: March 24, 1955 Interest: 4¾%

BORROWER • Central Hidroeléctrica del Río Anchicayá, Limitada (CHIDRAL)

CHIDRAL is a publicly owned corporation, and will be the sole supplier of electric power to Cali.

PURPOSE • This is the second loan made by the Bank to CHIDRAL for power development. An earlier loan of \$3,530,000 made in 1950 has helped to build a dam and a 24,000-kilowatt hydroelectric power

plant on the Anchicayá river about 30 miles from Cali, and transmission facilities.

The new loan will provide CHIDRAL with the foreign currency needed for equipment to expand its power system by an additional 32,500 kilowatts of generating capacity. The facilities to be added consist of a 20,000-kilowatt generating unit at the Anchicayá hydroelectric plant, a new 12,500-kilowatt thermal electric plant at Yumbo, just north of Cali, and extension of substation capacity.

ECONOMIC BENEFITS • Cali is Colombia's fastest growing city. Since 1938 the population has increased from 100,000 to 360,000. During the past few years it has also been the scene of extraordinary industrial growth. For years, however, Cali has been suffering from an inadequate power supply. The expansion in power capacity financed by this loan will take care of expected demand for power in the Cali area through 1960.

RAILWAY LOAN

Amount: \$15.9 million Term: 25 years
Date: June 15, 1955 Interest: 4¾%

BORROWER • Ferrocarriles Nacionales de Colombia

The borrower, the Colombian National Railroads, is an autonomous enterprise established in December 1954 to operate the state-owned railroads.

PURPOSE AND ECONOMIC BENEFITS • The loan was made to help finance an extension of the Magdalena Valley Railroad (now called the Atlantic Railroad) being built with the aid of a \$25 million loan made by the Bank in 1952. The original purpose of the Railroad was to provide a reliable rail-and-river route between central Colombia and the Caribbean ports, and to link the country's eastern and western rail networks. The extension will eliminate the need for river transport en route, and will provide a through rail connection to Santa Marta on the Caribbean coast. The rail line will also be linked with Barranquilla, Colombia's largest Caribbean port, by a truck-trailer service to be operated by the Railroad over a highway being built as a part of the national highway program; the service will cross the Magda-

lena River to Barranquilla by ferry. The chief benefit from the railway extension will be safer and faster transportation, with a saving of three to four days in transporting goods between the Caribbean and the principal cities of the interior. The line should also encourage agricultural development in the area traversed and increase the earnings of the Railroads.

The Bank's loan will pay for imported equipment and services needed to extend the railroad another 190 miles from Gamarra to Fundación; to improve the 60 miles of permanent way of the existing railroad from Fundación to Santa Marta; to construct terminal facilities at Santa Marta and at Ciénaga where the railroad and Barranquilla road will intersect; and to install ferry slips. The loan will also finance the purchase of additional rolling stock, a ferryboat and tractor-trailer units. The Colombian Government is financing the local currency costs of these facilities and the full cost of construction of the highway and expansion of port facilities at Santa Marta. The total amount of this Government financing is estimated at the equivalent of \$20.5 million.

Construction under the first loan began early in 1953 and the railroad is expected to be in operation by early 1958. If work on the extension is started soon, the new rail route to the Caribbean could be completed at the same time.

PARTICIPATION • The Bank of America National Trust and Savings Association participated in the loan, without the Bank's guarantee, to the extent of \$866,000. This amount represents the first four maturities which fall due from November 1, 1958 through May 1, 1960.

OTHER ACTIVITIES

MISSION TO THE CAUCA VALLEY • A Bank mission visited Colombia in February-March 1955 to assist the newly established Autonomous Regional Corporation of the Cauca in drawing up a preliminary plan for the development of the Cauca River Valley region. The Corporation is carrying out the first effort by a regional agency to systematically develop the resources of one of Colombia's river valleys, and intends to make the Cauca Valley a demonstra-

tion and training area for the country as a whole.

AGRICULTURAL MISSION • A Bank mission was in Colombia for three months beginning in March 1955 to undertake a general review of the agricultural sector of the economy and to make recommendations for a long-range program of agricultural development. Particular study was given to the allocation of resources available for investment in agriculture.

STAFF ASSISTANCE • In May 1955 the Bank stationed a staff member in Colombia to observe and advise on technical and administrative aspects of highway and railroad programs which the Bank is helping to finance.

COSTA RICA

In November 1954 a staff member and a financial consultant visited Costa Rica to study a project for expanding an agricultural and industrial credit program operated by the Banco Central de Costa Rica through the country's commercial banking system. Another staff member visited Costa Rica in March 1955 to carry out further investigations. The Bank expects soon to begin negotiations for a loan to assist in financing the project.

DOMINICAN REPUBLIC

The Bank's Director of Marketing visited the Dominican Republic in March 1955 to advise the Government on the development of the local capital market.

ECUADOR

PROJECT STUDIES • A Bank mission went to Ecuador in June 1955 to assess the current economic situation and to examine projects which are considered to be of high priority by Ecuador's National Planning Board. Among the projects are a program of highway construction and maintenance and the construction of a new port at Guayaquil. The Bank has also been giving active consideration to a project for enlarging the capacity of the hydroelectric power plant which serves Quito.

NATIONAL PLANNING BOARD • At the request of the Government, two staff members of the Bank visited

Ecuador at the end of 1954 to assist in organizing the National Board of Planning and Economic Coordination. At the same time the Bank's Director of Marketing went to Ecuador to advise the Board on measures to mobilize local capital. A Technical Director of the Board, who had been recommended by the Bank, was appointed early in 1955. Beginning in April 1955 a Bank staff member was stationed in Ecuador for a period of four months to serve as liaison between the Board and the Bank.

RAILWAY CONSULTANT • At the request of Empresa de Ferrocarriles del Estado, a consultant engaged by the Bank was in Ecuador in September-October 1954 to advise the Quito-Guayaquil Railroad on steps to improve management and operations. His report has been given to Empresa.

EL SALVADOR

HIGHWAY LOAN

Amount: \$11.1 million

Term: 12 years

Date: October 12, 1954

Interest: 4½%

BORROWER • El Salvador

PURPOSE • The project consists of the completion of a 190-mile all-weather highway along the Pacific coast extending from the border of Guatemala to the port of La Unión on the Gulf of Fonseca. The coastal highway was started several years ago; by late 1954, 25 miles were open to traffic and another stretch was being constructed and financed by the Government without outside assistance. The loan will finance the foreign exchange costs of the remaining sections totaling about 150 miles. The total cost of building these sections will be the equivalent of about \$16 million. The Highway Department of El Salvador will maintain the new highway and will expand its maintenance facilities for this purpose.

ECONOMIC BENEFITS • By opening up new land areas to cultivation, the highway should provide an incentive for increased agricultural production. Connecting with El Salvador's existing system of highways and feeder roads, the highway will complete an important farm-to-market link and will help to open up the country's last major land reserve to settle-

ment and cultivation. It is estimated that, with year-round access to wider markets at lower transportation costs, agricultural production in this coastal zone will increase in value by the equivalent of about \$10 million a year. Another expected benefit lies in denser settlement of the zone, which should relieve population pressure elsewhere in El Salvador. Eventually the new highway may also become an international artery linking El Salvador with Guatemala and Honduras.

PARTICIPATION • The Philadelphia National Bank participated in the loan, without the Bank's guarantee, to the extent of \$250,000 of the first maturity, which falls due April 15, 1959.

GUATEMALA

DEVELOPMENT PROGRAM • A Bank mission visited Guatemala in November 1954 to assist the Government in setting up a National Planning Council, which was established at the end of the year. In February 1955 the Bank stationed a Special Representative in Guatemala City to help prepare a five-year development program and to advise the Government on economic and financial policy.

CAPITAL MARKET • The Bank's Director of Marketing went to Guatemala in November 1954 to advise on steps for developing the local capital market.

PROJECT STUDIES • A Bank mission visited Guatemala in March-April 1955 to study highway projects for which the Government had requested a loan. In June 1955 negotiations were well advanced for a loan to help finance a program of highway construction and maintenance.

HAITI

The Bank sent two missions, one in November-December 1954 and the other in April 1955, to examine a program for the development of transportation. As a first stage of this program, the Government with the assistance of consulting engineers is engaged in strengthening its road maintenance organization and enlarging its operations, and has requested a Bank loan to finance equipment, materials and services for this purpose.

HONDURAS

A Bank staff member was in Honduras from October to December 1954 to assist the Government in setting up a National Economic Council. In January 1955 the Bank stationed a small resident mission in Honduras to assist the Council in drawing up a long-term program of economic development, and to advise the Government generally on economic and financial policy.

MEXICO

RAILWAY LOAN

Amount: \$61 million
Date: August 24, 1954

Term: 15 years
Interest: 4½%

BORROWER • Ferrocarril del Pacífico, S.A. de C.V.

The borrower, the Pacific Railroad of Mexico, is owned almost entirely by the Government. The railway extends 1,100 miles from Nogales on the Mexican-United States border to Guadalajara, Mexico's second largest city, and serves the northwestern coastal region.

PURPOSE • The Railroad is undertaking an extensive program of rehabilitation and modernization which includes the re-laying of almost the entire track, repairing bridges, replacing steam with diesel locomotives, the purchase and repair of freight cars, and the improvement of the communications system. The Bank's loan will pay for the import of 64 diesel locomotives; 684 freight cars; 4 million railroad ties; 170,000 short tons of rail; other track material; and communications and shop equipment. The entire program is expected to cost the equivalent of \$80 million and will take four years to complete. In addition to rehabilitation of its physical facilities, the Railroad is undertaking measures to improve its administration and efficiency of operation. Consultants have been retained to advise and assist in all phases of the program.

ECONOMIC BENEFITS • The Railroad traverses Mexico's northwest coast, an important and rapidly growing agricultural region. The area depends heavily on the services of the Railroad to carry products to Mexican and United States markets and to bring

in manufactured goods. Freight tonnage more than doubled between 1940 and 1952 but maintenance of the railroad and replacement of rolling stock and track failed to keep pace with the greatly increased demands. Improved and expanded rail services should stimulate agricultural production and thereby benefit the Mexican economy as a whole. The line crosses 600 miles of flat fertile coastal lands containing about 8.5 million acres suitable for agriculture. Approximately 1.75 million of this acreage is now irrigated and this figure is expected to be raised to 4.5 million in the next ten years. The principal crops of the area include wheat and cotton, and the region has also become an important source of winter vegetables for export to the United States. Gains in wheat and cotton production in the area have had a beneficial effect on Mexico's balance of payments; imports of wheat have been nearly eliminated, while cotton has become Mexico's chief export crop.

PARTICIPATION • The Chase Manhattan Bank and the Chemical Corn Exchange Bank participated in the loan without the Bank's guarantee. The Chase Manhattan Bank took \$1 million of the first maturity which falls due on June 1, 1959. The participation of the Chemical Corn Exchange Bank was \$210,000 of the first maturity and all of the second maturity of \$1,210,000 which falls due December 1, 1959.

OTHER ACTIVITIES

ELECTRIC POWER STUDY • This study, begun by the Mexican Government in October 1953, is nearing completion. Its purpose is to assess the needs of the country for expansion of electric power facilities and to recommend means of financing the expansion. The Bank has cooperated with the Government throughout the course of the study and during the fiscal year Bank staff members made periodic visits to Mexico to assist in the work.

NICARAGUA

STAFF ASSISTANCE • In September 1954 the Bank agreed to extend for another year the assignment of its Resident Representative in Nicaragua to advise the Government on economic development.

A staff member of the Bank visited Nicaragua in April 1955 to advise on the development of the local capital market, and in particular to give the Instituto de Fomento Nacional advice on its program for stimulating the investment of private capital in industrial enterprises.

PROJECT STUDIES • An agricultural consultant visited Nicaragua in February 1955 on behalf of the Bank to study various projects prepared by the Instituto de Fomento Nacional for the prevention and repair of soil erosion, for land clearance and for expansion of the dairy industry. Preliminary discussions have been held on the possibility of a Bank loan to finance imports needed for these projects.

LOAN NEGOTIATIONS • At the end of the fiscal year, negotiations were well advanced for two loans to help finance the construction of a thermal electric power plant at Managua, with transmission and distribution facilities, and the expansion of the distribution systems of 15 outlying communities which would use power from the new plant.

PANAMA

RESIDENT REPRESENTATIVE • In September 1954 the Bank agreed to extend for at least another year the assignment of its Resident Representative in Panama. The Representative, in cooperation with the local United States Operations Mission and other technical assistance agencies, is working on the preparation of a comprehensive program for the development of the economy of Panama.

LOAN NEGOTIATIONS • From time to time throughout the year Bank staff members visited Panama to advise on the preparation of a highway rehabilitation and maintenance program. Negotiations for a loan to help finance this program were well advanced by the end of the fiscal year.

PARAGUAY

In December 1951 the Bank made a loan of \$5 million to Paraguay for the development of agriculture. The proceeds were to be spent for hand tools, farm machinery and equipment for the construction and maintenance of farm-to-market roads. During the

fiscal year, the Bank and Government agreed to revise the program on which an unexpended balance of \$3.1 million of the loan would be used. The revised program lays greater stress on the mechanization of agriculture, on improved transportation facilities, and on aid to cattle raisers. Larger allocations have been made for the importation of farm machinery and for road building and maintenance equipment; a new feature of the program is the provision of funds for equipment to improve river transportation.

PERU

LOAN FOR AGRICULTURAL DEVELOPMENT

Amount: \$5 million	Term: 8 years
Date: November 12, 1954	Interest: 4¼%

BORROWER • Banco de Fomento Agropecuario del Perú.

The Banco is an autonomous government institution which provides agricultural credits and performs other services in the agricultural field.

PURPOSE • The Bank loan will enable the Banco to expand intermediate and long-term lending to farmers for imported goods and to devote more of its resources to loans for expenditures in local currency. About half of the proceeds of the loan will be used to purchase farm machinery, mostly tractors and tractor-drawn equipment. A quarter of the loan will be spent on irrigation equipment and the remainder for purchases of fencing materials, livestock for breeding purposes, and for equipment and materials for processing and storing food. With the exception of the livestock which the Banco Agropecuario will itself import and sell to farmers, the equipment and materials to be financed by the loan will be imported and sold through the usual commercial trade channels.

ECONOMIC BENEFITS • The introduction of agricultural machinery into the coastal region, where farm labor is short, is essential to greater production of Peru's principal export crops—cotton, sugar and rice. And machinery is necessary to raise and expand production of wheat, potatoes and barley in the high

mountain valleys, and for clearance of extensive jungle areas for settlement. Equipment for irrigation in areas along the coast, where there are severe shortages of water, is a basic requirement to increased agricultural production. The import of high quality stock will improve breeds of both cattle and sheep in Peru. Modern storage and processing equipment for food will have the effect of reducing waste and spoilage and should result in better returns to farmers and lower prices to consumers.

PARTICIPATION • The New York Trust Company participated in the loan, without the Bank's guarantee, to the extent of \$748,000, representing the first two maturities falling due in August 1957 and February 1958.

LOAN FOR IRRIGATION PROJECT

Amount: \$18 million

Term: 25 years

Date: April 5, 1955

Interest: 4¾%

BORROWER • Peru

PURPOSE • The loan will help to finance the second stage of an irrigation project being carried out by the Government in the coastal area of northern Peru. The project is near Piura, the center of a large and growing agricultural and industrial region, about 600 miles north of Lima. The first stage consisted of building tunnels and canals to divert water from the Quiroz to the Piura River; this has provided an assured supply of water for the cultivation of about 75,000 acres in the lower Piura Valley. The second stage consists of the construction of a dam which will create a reservoir to store water from the diversion system, and the building of 53 miles of main canals and 200 miles of lateral canals. The water made available will be sufficient to irrigate some 125,000 acres of now uncultivated land. The Bank's loan will cover the cost of imported services, equipment, materials and supplies. The total cost of the project is estimated at the equivalent of \$28.5 million. Work is scheduled to start in 1955 and the project should be complete in 1958.

The Government of Peru is acquiring the land to be irrigated and plans to sell it at reasonable prices

to farmers in lots ranging in size from about 35 to 250 acres, and will assist in financing these private purchases. Two agencies which received previous Bank loans will furnish services to farmers for the cultivation of land. The Government is arranging with the Banco de Fomento Agropecuario to make credit available to purchasers for the clearing and preparation of the land, and with Servicio Cooperativo Interamericano de Producción de Alimentos (SCIPA), to make its machinery pools available to those farmers who do not own their own equipment. The Bank made earlier loans of \$5 million to the Banco (see p. 48) and \$3 million to SCIPA for the expansion of their operations.

ECONOMIC BENEFITS • About 60% of the new acreage to be brought into production will be devoted to food crops and pasture, and the output will be used for local consumption. This should prove an important addition to Peru's domestic food supply and should help cut mounting imports of food. The remaining acreage will be used to grow long staple cotton, a readily exportable commodity which commands premium prices throughout the world. Thus the project should produce considerable savings in foreign exchange now expended on food imports and should add to Peru's exchange earnings through increasing exports of cotton.

PARTICIPATION • The Manufacturers Trust Company and the New York Trust Company participated in the loan, without the Bank's guarantee, to the extent of \$496,000, representing the first two maturities falling due in September 1959 and March 1960.

LOAN FOR CEMENT PLANT

Amount: \$2.5 million

Term: 15 years

Date: April 19, 1955

Interest: 4½%

BORROWER • Compañía Nacional de Cemento Portland del Norte, S.A.

The borrower is a privately-owned Peruvian company, established in 1954.

PURPOSE • The Bank's loan will help to finance construction of a Portland cement plant at Pacasmayo in northern Peru. The new plant will have a capacity

of 100,000 tons of cement annually, and is expected to come into operation in 1957. It will be of modern design and include complete power facilities. Total cost of the project is estimated at the equivalent of \$5 million.

ECONOMIC BENEFITS • Northern Peru must now obtain its supplies of cement either from two plants located near Lima, about 400 miles south of the new plant, or from abroad. Notwithstanding the high cost of cement in this region, consumption has quadrupled in the past six years. The new plant should not only provide cement at a lower cost but should also bring about substantial savings in foreign exchange.

PARTICIPATION • The Manufacturers Trust Company participated in the loan, without the Bank's guarantee, to the extent of \$310,000, representing the first four maturities falling due in 1958 and 1959.

OTHER ACTIVITIES

PROJECT STUDIES • A mission from the Bank visited Peru for a period of five weeks in April-May 1955 to review the economic situation, to discuss future development plans of the Government, and to make a preliminary examination of several projects for which financing has been requested.

URUGUAY

At the end of the fiscal year, negotiations were well advanced for a loan to the Administración General de las Usinas Eléctricas y los Teléfonos del Estado for another 50,000-kilowatt thermal electric power unit for Montevideo. In addition, the Bank has informed the Government and the Special Commission for Livestock Development that it is prepared to receive Uruguayan representatives in Washington to negotiate a loan for a livestock project.

Administrative Budget

FOR THE FISCAL YEAR ENDING JUNE 30, 1956

There is outlined below the Administrative Budget for the fiscal year ending June 30, 1956, as prepared by the President and approved by the Executive Directors in accordance with Section 19 of the By-Laws. For purposes of comparison, there are also outlined below the administrative expenses incurred during the fiscal years ended June 30, 1954, and 1955.

	<i>Actual Expenses</i>		<i>Budget</i>	
	<i>1954</i>	<i>1955</i>	<i>1956</i>	
BOARD OF GOVERNORS	130,999	193,037	397,000

	835,182	1,122,538		
CONTINGENCY	—	—	100,000	
Total	\$5,555,596	\$6,087,880	\$7,040,000	
SPECIAL SERVICES TO MEMBER COUNTRIES	416,806	560,395	575,000	
Grand Total	\$5,972,402	\$6,648,275	\$7,615,000	

The initial Administrative Budget for the fiscal year ending June 30, 1955 was \$6,422,000; an increase in this amount to \$6,692,000 was approved by the Executive Directors during the year.

No estimate has been made of bond registration, issuance and other financial expenditure for the fiscal year ending June 30, 1956. The amount of bonds which may be issued by the Bank during the year is not known. These expenditures may amount to about \$100,000, exclusive of commissions and premiums, for each \$100 million of bonds which the Bank may issue.
